# Timing Diagram with ACK mismatch

Client sends a write request, server responds with an ACK. Client then sends something other than a data packet. Server responds with an "Unexpected Communication Type" and quits.

WRQ (source = client's TID, dest = server's TID)

ACK (blk # = 0, source = server's TID, dest = client's TID)

NON-DATA (blk # = 1, source = client's TID, dest = server's TID)

ERROR (opcode = 5, errorcode = 4, message = "Unexpected Communication Type",

source = server's TID, dest = client's TID)

Lost data packet(waiting for an acknowledge)

X represents one of the many possible error messages
